Office Action Summary

Application No.

09/897,141

Applicant(s)

YABU, MASANORI

Examiner

Tom P. Duong

Art Unit

1764

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 23 February 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,4,5,7-9 and 13-16 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,4,5,7-9 and 13-16 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Applicant's remarks and amendments filed on February 23, 2005 have been carefully considered. Claims 1, 4-5, 7-9 and 13-16 have been amended. Claims 2-3, 6, and 10-12 have been canceled. Claims 1, 4-5, 7-9, and 13-16 are pending in this application.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1, 4-5, 8-9, 13, and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tsuchiya '217. Regarding claims 1 and 16, Tsuchiya '217 discloses a golf club head (Figs. 1-7) comprising a Ti-alloy face (21) with thickness of 2-3.5mm, a Ti-alloy crown (22) with thickness of 0.6-3.0 mm, a sole (23) with thickness of 1-3 mm, a sidewall extending from the periphery of the sole towards the crown and the neck extending from the sole member (Fig. 7) excluding the face, and a neck to be fixed to a shaft. Tsuchiya discloses it is conventional to form the club head parts by casting method including the sole and wall member (Col. 2, lines 24-38). However, the conventional casting technique suppresses enlargement of sweet spot (Col. 1, lines 54-54), difficult to control center of gravity (Col. 1, lines 64-65), poor flexion or coefficient of

restitution (Col. 2, lines 13-15), and small moment of inertia values (Col. 2, lines 59-69).

The above drawback is overcome in Tsuchiya's invention by fabricating the face and crown area thinner (Col. 2, lines 15-24) using plastic working or plastic deformation process (Col. 4, lines 61-68) or plastic deformation process in order to accomplish large sweet spot, improved coefficient of restitution, and moment of inertia (Col. 3 lines 64-64). With respect to the sole thickness ratio (t_2/t_1), Tsuchiya discloses the sole thickness ranging from 1 to 3 mm (Col. 4, lines 50-51), wherein t_1 is 0.6-3.0 mm and t_2 is 1.0-3.0 mm. With respect to the sweet spot height less than 28.0 mm and a depth of center of gravity less than 36.0 mm, Tsuchiya '217 discloses the golf club of the claimed invention and it would have been prima facie obviousness to provide the golf club of Tsuchiya '217 with the properties of the claimed invention thru routine optimization.

Note, only result-effective variables can be optimized thru routine optimization. See *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980) and See *In re Aller*, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955). Regarding claims 4-5 and 9, Tsuchiya discloses the head volume is 190 cc or larger (Col. 3, lines 50-52) and a density value of 4.5 g/cm³ (Table 1). Regarding claim 8, it is obvious if not inherent that the plastic working process utilizes rolled sheet metal as the starting material. Regarding claim 13, Tsuchiya discloses the moment of inertia of 3000 or larger (Col. 3, lines 64-69).

2. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tsuchiya '217 in view of Peterson (6,162,133) and Hoshi et al. (5,205,560). Tsuchiya discloses it is conventional to fabricate club head, which includes the sole and sidewall with casting

Art Unit: 1764

material (Col. 2, lines 24-30), but does not disclose expressly the lost wax casting technique. Peterson teaches that the club head 10, including the sole plate and side wall, is fabricated as a one-piece body 32 by casting such as lost wax casting (Col. 4, lines 23-63) in order to eliminate the disadvantage of welding and mechanical fastening (Col. 2, lines 37-41). Hoshi '560 also teaches that it is conventional to fabricate the club head with lost-wax casting process. Thus, it is obvious in view of Peterson and Hoshi to one having ordinary skill in the art that Tsuchiya utilizes the conventional casting method including the wax-casting process. Addition, the patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." *In re Thorpe*, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985). See MPEP 2113.

3. Claims 14 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tsuchiya '217 as applied to claim 1 above, and further in view of Igarashi (6,238,300). Regarding claims 14 and 15, Tsuchiya fails to disclose the walled sole member is made of titanium alloy (Ti-6Al-4V) and the face member and crown member is made of titanium alloy Ti-15V-3Al-3Sn-3-Cr whose strength is higher than that of the titanium alloy of the walled sole member. Igarashi teaches the walled sole member (52A, 52B) (Col. 1, lines 9-20) and the face member 56 and crown member 54 can be made from titanium alloy such as Ti-6-4 or beta alloy Ti-15-3-3-3-3 depends on material cost, material strength, and attachment technique (Col. 3, lines 49-62). Thus, it would

have been obvious in view of Igarashi to one having ordinary skill in the art to modify the club head of Tsuchiya with the face and crown members with a higher strength alloy than the walled sole member as taught by Igarashi if material strength is one of the main design criteria for the face and crown members.

Response to Arguments

Applicant's arguments filed 2/23/05 have been fully considered but they are not persuasive. (1) With respect to the argument of the t_2/t_1 ratio, examiner respectfully disagrees. Tsuchiya discloses $t_2 = 1.0\text{-}3.0$ mm and $t_2 = 0.6\text{-}3.0$ mm and the ratio (t_2/t_1) is $1.2\text{-}3.0$ mm. Note, overlap or lie inside ranges disclosed by the prior art establishes case of prima facie obviousness. See *In re Wertheim*, 541 F.2d 257, 191 USPQ 90 (CCPA 1976) and *In re Woodruff*, 919 F.2d 1575, 16 USPQ2d 1934 (Fed Cir. 1990). (2) With respect to using different materials in a golf club head, Examiner agrees Tsuchiya disclose a common alloy material for the golf club head; however, Igarashi teaches the advantage of fabricating the walled sole member (52A, 52B) (Col. 1, lines 9-20) and the face member 56 and crown member 54 from titanium alloy such as Ti-6-4 or beta alloy Ti-15-3-3-3-3 depends on material cost, material strength, and attachment technique (Col. 3, lines 49-62). Thus, it would have been obvious in view of Igarashi to one having ordinary skill in the art to modify the club head of Tsuchiya with the face and crown members with a higher strength alloy than the walled sole member as taught by Igarashi if material strength is one of the main design criteria for the face and crown

members. Note, in the Remarks, Applicant has indicated claims 14 and 15 have been canceled; however, the amended claims do not show these claims have been canceled.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tom P. Duong whose telephone number is (571) 272-2794. The examiner can normally be reached on 8:00AM - 4:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Caldarola can be reached on (571) 272-1444. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
